Laurie Harper

Living with T1D

Nearly 1 in 8
Americans live with
diabetes today.

The Most Common Kinds of Diabetes

Type 1

Over 2 million Americans are living with type 1 diabetes

Type 2

Over 38 million Americans are living with type 2 diabetes

GDM

Every year, up to 9% of pregnancies in the US are affected by gestational diabetes (GDM)

How is diabetes treated?

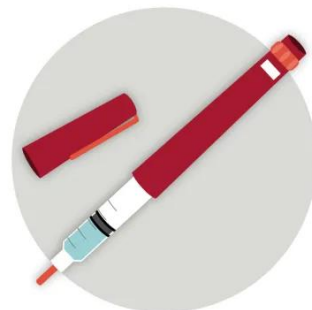

Diabetes may be treated with meal planning, physical activity, and medications—which may include oral medications, insulin, or other injectable medications.

Diabetes and Emergency Preparedness

ADA Statement on Emergency and Disaster Preparedness

Lessons from Hurricane Katrina included the difficulties of:

- Obtaining needed medication and testing supplies
- Providing consistent replacement medication
- The impact of the abrupt change in diet, lack of medication, and stress

Hyperglycemic Crises

Diabetic ketoacidosis (DKA) and the **hyperglycemic hyperosmolar state (HHS)** are the two most life-threatening hyperglycemic emergencies. Stress, infection, and not receiving your insulin can lead to these serious conditions.

My Diabetes Emergency Plan

- Prepare a portable, insulated, and waterproof diabetes emergency kit that contains:
 - List of important information
 - Supplies
 - Food and water
 - Pen/pencil, notepad, first aid supplies, and more

Download the full checklist at [ace.com/disease-and-conditions/diabetes/are-you-prepared-manage-your-diabetes-emergency](https://www.ace.com/disease-and-conditions/diabetes/are-you-prepared-manage-your-diabetes-emergency).

Emergency Supplies

Your emergency kit should have at least a week's worth of supplies, which could include:

- oral medication
- insulin and delivery supplies
- lancets
- extra batteries for your meter and/or pump
- quick-acting source of glucose

It should be kept in an easily identifiable container and stored in an easily accessible location.

Emergency Contacts

- An emergency supply kit should contain a list of emergency contacts.
- Wearing medical identification will enable responders to identify and address medical needs.

Emergency Shelter

Under the Americans with Disabilities Act, places of public accommodation must make modifications as needed to ensure equal access. Here are some examples for people with diabetes.

- Modification to “no sharps” policies or “no animals” policies
- Modification to policies restricting types or amounts of snacks or drinks allowed
- Allow unrestricted bathroom access
- Allow for safe and responsible administration of insulin and blood glucose testing
- Provide refrigeration for appropriate storage of medication
- Remove structural roadblocks or provide alternative measures, as needed, for people with neuropathy, amputations, etc.
- Provide appropriate aids for people whose vision is impaired

Places of public accommodation are **not** required to provide diabetes supplies, food, or drinks.

Practical Tips

Question and Response

We're here to help.

Contact Us

Visit **diabetes.org** or call **1-800-DIABETES** (800-342-2383) Monday through Friday from 9:00 a.m. to 5:30 p.m. ET to learn more about these resources and:

- How to prevent or manage diabetes
- Healthy living
- Getting involved by participating in local ADA events
- Advocacy for people with diabetes

Thank you.
